# PREPARED STATEMENT OF THE FEDERAL TRADE COMMISSION

on

### I. INTRODUCTION

ChairmanLevin, Ranking Member McCajrand members of the

As the nation's consumer protection agenby, FTC is committed to protecting consumers in the online marketplace. The Commission is primarily a civil law enforcement agency, and its main operative statute is Section 5 of the FTC Act, which prohibits unfair or deceptive acts or practicers or affecting commerce. A company acts deceptively if it makes materially misleading statements or omission's company engages in unfair acts or practices i its practices cause or are likely to cause substantial injury to consumers that isreeitheably avoidable by consumers nontweighed by countervailing benefits to consumers or to competition! The Commission uses its enforcement authority under Section take action against online advertising companies and others engaged in unfair or deceptive practices. It also educates consumers and busineabesit the online environmeand encourages industry self regulation.

This testimony will discuss the Commission's work to address three consumer protection issues affecting the online advertising industry: privacy, malware, and data security. It will then provide some recommendations for next steps in this area.

## II. CONSUMER PROTECTION ISSUES AFFECTING THE ONLINE ADVERTISING INDUSTRY

#### A. PRIVACY

Since online privacy first emerged as a significant issue in the **396**s, it has been one of the Commission's highest consumer protection priorities. The Commission has worked to address privacy issues in the line marketplace, particularly those raised by online advertising networks, through consumer and business education, law enforcement, and policy initiatives.

<sup>&</sup>lt;sup>2</sup> 15 U.S.C. § 45(a)The Commissionlao enforces numerous specific statutes.

<sup>&</sup>lt;sup>3</sup> See Federal Trade CommissRoolicy Statement Deceptionappended to Cliffdale Assocs., Inc., 103 F.T.C. 110, 174 (1984)

<sup>&</sup>lt;sup>4</sup> See 15 U.S.C. § 45(n); Federal Trade Commission Policy Statement on Unfairness, appended to Int'l Harvester Cq. 104 F.T.C. 949, 1070 (1984) ("FTC Unfairness Statement").

Throughout the last decade, the FTC has examthree privacy implications of online behavioral advertisinthrough a number of workshops and reports March of 2012, the Commission released its Privacy Report, which set forth best practices for businesses – including the online advertising industry – to protect consumer privacy while ensuring that companies can continue to innovate. The reportalled on companies to provide simpler and more streamlined choices to consumers about their data, through a robust universal choice mechanism for online behavioral advertising

The Commission has also engaged in a number of privacy enforcement actions involving the online advertising industryFor example,ri its first online behavioral advertising case, the Commission alleged that online advertising work Chitika violated theTC Acts prohibition on deceptive practices when it offered consumers the ability to opt out of the collection of information to be used for targeted advertising – without telling them that thou basted only ten days. The Commission's order problets Chitika from making future privacy

network, Epic was employing fistory-sniffing" technology that allowed it to collect data about sites outside its network that consumers had visited, including sites relating to personal health conditions and finances The FTC alleged that he history sniffing was deceptive and allowed Epic to determine whether a consumer had visited any of more than 54,000 domains, including pages relating to fertility issues, impotence, menopause, incontinence, disability insurance, credit repair, debt relief, and personal bankruptcy. Trater imposed similar relief to the other cases in this area.

Finally, in 2012 Google aged to pay a record \$22.5 million civil penalty to settle charges that it misrepresented to Safari browser usatrist thould not place tracking cookies serve targeted ads toeths, <sup>11</sup> violating an earlier privacy order with the Commission its compaint, the FTC alleged that for several months, Google placed a certain advertising tracking cookie on the computers of Safari users who visited sites within Google's DoubleClick advertising network, although Google had previously told these users they would automatically be opted out of such tracking, as a result of the Safari browser default settliergesite these promises, the FTC allegedoultt th(e)67(a)-9(fa5 0 Tc 0 T)]TJ 153C 3004 Tw -37.re(e)]0co-0.002 Tw

#### B. SPYWARE AND OTHER MALWARE

Spyware and other malware can cause substantial harm to consumers and to the Internet as a medium of communication and commendenedownloaded without authorization, including through online ads, spyware and other malwanecause a range problems for computer users, from nuisance adware that deliversupages, to software theatuses sluggish computer performance, to keystroke loggers that capture sensitive information.

The Commission has soughtaddress concerns about spywærred othernalware through law enforcement and consumer educationnce \$2004, the Commission has initiated a number of malware related law enforcement actions, which reaffirm three principles. The first is that a consumer's computer belongs to him or her, not to the software distributor, and it must be the consumer's choice whether or not to install software. This principle reflects the basic commonsense notion that Internet boossesses are not free to help themselves to the resources of a consumer's computer. For example, in FTC v. Seismic Entertainm'earth.

FTC v. Enternet Media, Inc., the Commission alleged that the defendants unfairly downloaded spyware to users' comparts without the users' knowledge, in violation of Section 5 of the FTC Act. And, in its case against CyberSpy Software LLC, the FTC alleged that the defendants unfairly sold keylogging software others that could be downloaded to users' computers without their knowledge or conselfit.

<sup>&</sup>lt;sup>14</sup> FTC v. Sismic Entertainment Productions, Inc., et al., No.3047–JD (D.N.H. 2006), available at <a href="http://www.ftc.gov/enforcement/caspsoceedings/042142x05-0013/seismiæntertainment">http://www.ftc.gov/enforcement/caspsoceedings/042142x05-0013/seismiæntertainment</a> productionsinc-et-al.

<sup>&</sup>lt;sup>15</sup> FTC v. Enternet Media Inc. et al., No. CV 7037 CAS(C.D. Cal. 2006)available at <a href="http://www.ftc.gov/enforcement/caspsoceedings/052135x06-0003/enternetmediainc-conspycoinc-et-al">http://www.ftc.gov/enforcement/caspsoceedings/052135x06-0003/enternetmediainc-conspycoinc-et-al</a>.

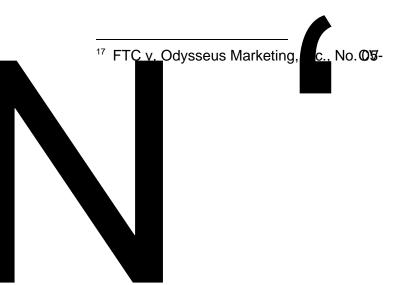

<sup>&</sup>lt;sup>16</sup> FTC v. CyberSpy Software, LLNo. 6:08ev-1872ORL-31GJK (M.D. Fla. 2010)available at <a href="http://www.ftc.gov/enforcement/caspsoceedings/082160/cyberspysoftwarellc-tracer-spence">http://www.ftc.gov/enforcement/caspsoceedings/082160/cyberspysoftwarellc-tracer-spence</a>

The second principle is that buried disclosures of material information necessary to correct an otherwise misleading impression are not sufficient in connection with software downloads just as they have never been sufficient in more traditional areas of commerce.

Specifically, burying material information in £md User License Agreement will not shield a malware purveyor from Section 5 liability. This principle was illustrated ic FTO dysseus

Marketing, Inc.¹7 and Advertising.com, In¹c. In these two cases, the Commission alleged (among other violations) that the companies failed to disclose adequately that the free software they were offering was bundled with harmful software parons.

The third principle is that, if a distributor puts a program on a computer that the consumer does not want, the consumer should be able to uninstall or disable it. This principle is underscored by the FTCosases against Zango, Iffoand DirectRevenue LLC. These companies allegedly provided advertising programs, or adware, that monitored consumers' Internet use and displayed quent, targeted papp ads – over 6.9 billion papes by Zango alone. According to the ommission's complaints, the companies deliberately made these adware programs difficult for onsumers to identify, locate, and remove from their computers, thus thwarting consumer efforts end the intrusive papes. Among other relief, the consent

In its most recent data security, se, the FTC announced a settlement with Snaphbat, a company that markets a popular mobile application ("athrait) allows consumers to send and receive photo and video messages knowrsaaps." According to the complaint, Snapchat misrepresented that its app provided a private, stived messaging service, claiming that once the consumeset timer for a viewed snap expired, the snappears forever. Snapchat's app has a Find Friends feature that allows consumers to find and communicate with friends who use the Snapchat service. However, unbeknownst to users, the leature collected the names and phone numbers of all contacts in a user's mobile device address book and had major security flaws. The complaint alleges that Snapchat violated Section 5 by misrepresenting the disappearing nature of messages sent through its app and the amount of personal information that its app would collect for the Find Friends feature.

The complaint also charges

The FTC also recently entered into settlements with Credit Karma and Fandango,

LLC.31 to resolve allegations that the companies misrepresented the security of their mobile apps.

Credit Karma's mobile app allows consumers to monitor and access their credit scores, credit reports, and other credit report and financial data, and has been downloaded over one million

and other government agencies at the state, local, and federatoevse these materials and tailor them to their particular constituencies and concerns.

The second is continued industry stelfgulation to ensure that and tworks are taking reasonable steps to prevent the use of their systems to displications add to consumer stust last week, Facebook, Google and Twitter publicly unveiled TrustInAds.org, a new organization aimed at protecting people from malicious internal advertisements. The companies report that they will bring awareness to consumers about online ladded scams and deceptive activities, collaborate to identify trends, and share their whele with policymakers and consumer advocates. In addition, the Online Trust Alliance has published guidelines for companies in this area, along with a risk evaluation tool. The Commission applauds these groups for taking steps to address this issue.

Finally, the Commission continues to reiterate its longstaking, bipartisan call for enactment of a strong federal data security and breach notification Reasonable and appropriate security practices are critical to preventing data breaches and protecting consumers from identity the ft and other harm. eSpitethe threats posed by data breaches, many companies continue to underinvest in data security. For example, the Commission's settlements have shown that some companies fail to taken the most basic security precaution as updating antivirus software or requiring network administrators to use strong passwork with reports of data breaches on the rise, and with a significant number of Americans suffering from identity the ft, having a strong and uniformational data security requirement would reinforce the requirement under the FTC Act that mpanies must implement reasonable measures to ensure

33

that consumers personal information is protected. Athough most states have breach notification laws in place, having a strong and coresist national breach notification requirement would simplify compliance by businesses while ensuring that all consumers are protected.

Among other things, such legislation would supplement the Commission's existing data security authority by authorizing theommission to seek civil penalties in appropriate circumstances against companies that do not reasonably protect consumers' or diding the Commission with authority to seek civil penalties in these cases would help deter unlawful conduct including using malware to gain access to consumers' personal information – such as through keystroke loggers. Ush legislation could provide the Commission with an important consumer protection tool

#### VI. CONCLUSION
